3M™ High Gel Re-enterable Encapsulant 8882

3M™ High Gel Re-enterable Encapsulant 8882 is a two-part nonurethane encapsulating compound. The encapsulant aggressively adheres to filled cable and is compatible with common plastics used in telephone splice connectors. It can be used to seal and protect copper connections inside an enclosure when the enclosure is placed below grade or direct buried.

The encapsulant permits easy cable splice re-entry for future changes and maintenance. The 8882 encapsulant is one of a system of products available from 3M.
